

DIVER MEDIC TECHNICIAN

Skills Training Kit For Rental

Maintaining the 'Medical Skills' learnt during the **IMCA Diver Medic Course** could one day **'Save a Life'**. The medical skills fade between the required IMCA DMT refresher training course can now be prevented by conducting the medical procedures and techniques 'on-site' while at work.

The **KBAT DMT Skills Training Kit** has been established to meet the 'on-site skills' training needs and encourage DMTs to stay current and familiar with the medical techniques that may be required in an emergency.

The training manikins are provided to cover each skill set outlined in **IMCA D020**.

It has been proven during recent accidents offshore that the **IMCA Diver Medic** has been pivotal in saving lives.

The Benefits

- **Practice** medical skills onsite.
- **Maintain** DMT's operational readiness.
- **Enhance** emergency drills by including the training manikin's.
- **Continued competency** development.
- **Safety on-site** - Enhance emergency response and life saving ability for all worksite support requirements.

Scenario: The dive team onboard the lay barge has been using the KBAT DMT Skills Training Kit for the duration of the project. During a subsea lifting activity, the crane dropped the load and the diver suffered from severe crush injuries. Having practiced their Intravenous Infusion / Intraosseous Infusion, Airway Management and associated skills, the DMTs were able to stabilise the injured diver with confidence in the skills they knew prior to emergency evacuation.
